

Self-Evaluation and Limitations

1. Self-evaluation parameters

- a. GUI Design
- b. Production
- c. Maintenance
- d. Usability

2. Ratings

- a. GUI Design: 3/5
 - The GUI of the application can be improved a lot, such as the application can be built using 3D Modelling, to give the feel of a real 'Enigma' machine, but the time constraint allowed only a basic GUI application.
- b. Production: 5/5
 - The existing application can easily be shared, as a user only needs to have the JAR file, and the JAR file can run on any system with JRE installed on it.
 - The application will be available soon on my GitHub account.
- c. Maintenance: 5/5
 - The application requires barely any maintenance (with the current version).
- d. Usability: 4/5
 - The application is easy to use for anyone who knows how to run an Enigma machine, but there always some scope of improvement when it comes to usability and user satisfaction.

3. Overall Rating: 4.25/5
